TABLEAU DASHBOARD PROJECT

DMart Sales & Profitability Analysis Dashboard using Tableau

Student Name	Nandini Santosh Chaudhari
Roll No.	T006_____
Class / Batch	TY.BSc.IT
Subject	Data Visualization with Power BI and Tableau_
Academic Year	2026-2027

Submitted to: Prof. Sumit Kumar Tripathi

1. Project Title

DMart Sales & Profitability Analysis Dashboard using Tableau

2. Objective

The objective of this project is to develop an interactive Tableau dashboard for evaluating DMarket's sales and profitability data. The dashboard presents important business information through visualizations, making it easier to compare product categories, regions, states, customers and sales trends. It also helps in identifying high-performing products and understanding the overall sales and profit performance of the business.

3. Project Description

This project uses Tableau to create an interactive dashboard for analysing DMarket sales and profitability data. The dashboard presents important information through charts, maps, filters, and visualizations, allowing users to explore different aspects of the sales data. Users can compare category-wise and regional performance, analyse state and city-level sales, identify top-performing products, study monthly sales trends, and understand customer value. The project demonstrates how Tableau can be used to transform retail sales data into clear visual insights and support better understanding of business performance.

4. Dataset Details

Parameter	Details
Dataset Name	DMart Sales Dataset_____
Source	CSV Dataset
Number of Records	5,000_____
Number of Customers	1,180
Number of Products	30
Number of Categories	6
Important Fields	Order_ID, Order_Date, Customer_ID, Customer_Name, State, City, Region, Category, Product_Name, Quantity, Unit_Price, Discount, Sales, Profit, Payment_Mode, Store_Type and Customer_Segment.

5. Tools & Technologies Used

- Tableau Desktop
- CSV Dataset
- Data Visualization
- Tableau Calculated Fields
- Tableau Maps
- Interactive Dashboard
- Filters and Charts

6. Tableau Worksheets / Charts

Visualization	Purpose
Category Sales(Bar Chart)	To compare sales across different product categories
Region Profit(Bar Chart)	To compare profit generated by different regions and categories
Monthly Sales Trend (Line Chart)	To analyze monthly changes and trends in sales
State Sales Map(Filled Map)	To visualize sales performance across different states
Top 10 Products by Sales (Bar Chart)	To identify and compare the top 10 products based on sales
Customer Value Scatter Cluster	To analyze customer value based on purchase frequency and monetary value
Interactive Filters	Product_name,Payment_mode

7. Calculated Fields

The following calculated fields can be used in the Tableau dashboard:

Profit Ratio:- $\text{SUM}([\text{Profit}]) / \text{SUM}([\text{Sales}])$

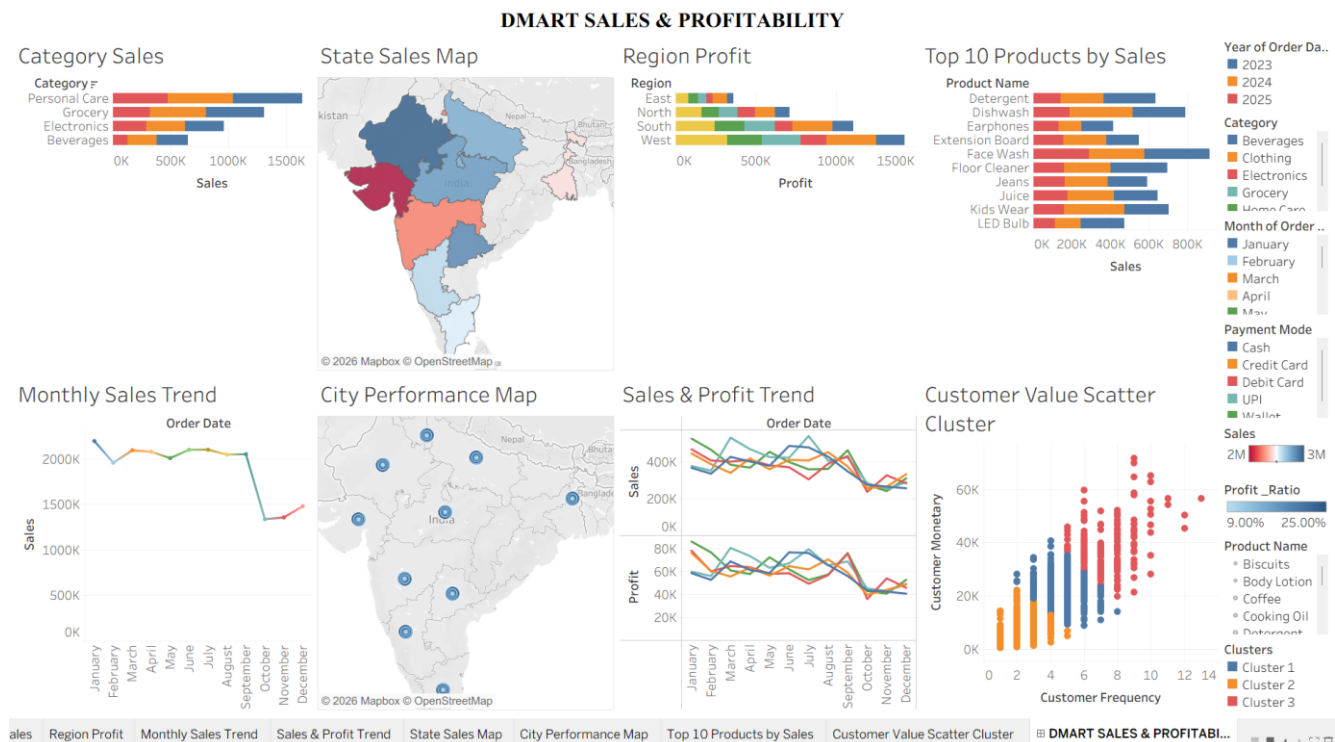

Discount Amount:- $[\text{Sales}] * [\text{Discount}]$

Customer Frequency:- $\{ \text{FIXED } [\text{Customer_ID}] : \text{COUNTD}([\text{Order_ID}]) \}$

Customer Monetary:- $\{ \text{FIXED } [\text{Customer_ID}] : \text{SUM}([\text{Sales}]) \}$

Customer Profit:- $\{ \text{FIXED } [\text{Customer_ID}] : \text{SUM}([\text{Profit}]) \}$

8. Dashboard Screenshot

9. Key Insights

1. Category Performance

Grocery records the highest sales among the available product categories, showing strong demand for grocery products.

2. Regional Performance

The West region shows the highest overall sales and profit contribution among the four regions.

3. State Performance

Rajasthan records the highest sales among the states in the dataset.

4. Product Performance

Biscuits is the highest-selling product based on total sales, followed by Wheat Flour and Cooking Oil.

5. Payment Mode

UPI contributes the highest sales among the available payment modes.

6. Profitability

Personal Care records the highest profit among the product categories.

7. Store Type

Supermarkets contribute slightly higher sales compared with Hypermarkets.

10. Video Demonstration
